FREQUENTLY ASKED QUESTIONS

What age can I start feeding milkPRO+™?

milkPRO+™ is suitable for feeding from approximately 4 days of age, once calves have received adequate colostrum. Always ensure calves have consumed sufficient high-quality colostrum immediately after birth before transitioning to a calf milk replacer.

Is milkPRO+™ suitable for automatic calf feeders?

Yes. milkPRO+™ has been specifically formulated for excellent mixability and is suitable for use in both manual feeding programs and automatic calf feeding systems.

How should I store milkPRO+™?

Store milkPRO+™ in a cool, dry place away from direct sunlight and moisture. Once opened, reseal the bag after each use to help maintain freshness and product quality.

What's the difference between milkPRO+™ and No Bovatec®?

milkPRO+™ No Bovatec® provides the same high-quality nutritional support as our original milkPRO+ formula, without the inclusion of Bovatec®. It is ideal for farmers who prefer a non-medicated calf milk replacer.
