FREQUENTLY ASKED QUESTIONS

What age can I start feeding milkPRO+™?

milkPRO+™ is suitable for feeding from approximately 4 days of age, once calves have received adequate colostrum. Always ensure calves have consumed sufficient high-quality colostrum immediately after birth before transitioning to a calf milk replacer.

Is milkPRO+™ suitable for automatic calf feeders?

Yes. milkPRO+™ has been specifically formulated for excellent mixability and is suitable for use in both manual feeding programs and automatic calf feeding systems.

How should I store milkPRO+™

Store milkPRO+™ in a cool, dry place away from direct sunlight and moisture. Once opened, reseal the bag after each use to help maintain freshness and product quality.

What does Bovatec® do?

milkPRO+™ contains Bovatec® (Lasalocid) to aid in the prevention of coccidiosis when used as directed. Always follow the feeding directions provided on the product label.
